

# **Aprima Medical Software Selects DiagnosisOne to Deliver Clinical Decision Support for Electronic Health Records**

**Partnership Enables Healthcare Providers to Increase Practice Efficiency, Care Quality with Real-Time Decision Support and Satisfy Key Meaningful Use Requirements**

LOWELL, Mass., Jan 30, 2012 (BUSINESS WIRE) -- DiagnosisOne, the clinical decision support and analytics company, today announced that Aprima Medical Software has selected DiagnosisOne to provide clinical decision support (CDS) for its electronic healthcare record (EHR) solution.

Through this partnership, the Aprima EHR will seamlessly integrate DiagnosisOne's smartConsult solution into its CCHIT-certified offerings to deliver real-time, patient-specific alerts at the point of care. The combined offering will help healthcare providers meet current Meaningful Use criteria, provide patient education and be well-positioned for future more advanced criteria.

Aprima Medical Software develops template-free, content-rich EHR software that enables physicians nationwide, with practices ranging from solo rural providers to multi-specialty urban groups, to follow their own protocols. Its adaptive learning feature speeds adoption and deployment, a critical capability as medical practices seek to meet Meaningful Use standards for government stimulus fund reimbursements. Aprima selected DiagnosisOne as the provider of CDS capabilities for its EHR offerings based on the flexibility of DiagnosisOne's standards-based solutions for rapid deployment and their unique ability to help providers improve efficiency, safety and outcomes while maximizing reimbursement. Just as important is their ability to provide patient education and patient-focused alerts.

"Partnering with DiagnosisOne enables Aprima to combine a powerful, data-driven CDS platform, which has the ability to synchronize patient-focused alerts with physician-focused alerts. DiagnosisOne will also help our customers by providing robust patient education functionality. Our combined capabilities set the benchmark for ease of use, speed and flexibility," said Aprima CEO Michael Nissenbaum. "We're committed to providing medical practices of any size with a best-in-class solution that improves quality, drives efficiency and raises productivity. Partnering with DiagnosisOne helps us achieve that goal by translating data into evidence-based clinical decisions."

DiagnosisOne's leading-edge CDS technology enables healthcare providers to efficiently make the most informed, evidence-based treatment decisions. DiagnosisOne provides end-to-end CDS capabilities that automatically make patient information from disparate systems accessible to a provider, along with a configurable collection of more than 25,000 actionable clinical observations. DiagnosisOne's standards-based, turnkey solutions are fully configurable to each organization's specific needs with minimal effort.

"As the demand for clinical decision support grows, our partnership with Aprima will help providers make the most informed, evidence-based decisions in real time, at the point of care and beyond," said Dr. Mansoor Khan, founder and CEO of DiagnosisOne. "Our platform integrates seamlessly into EHR solutions to satisfy CDS and HITECH reporting requirements while meeting provider demand for actionable analytics."

#### About Aprima Medical Software, Inc.

Aprima provides innovative electronic health record, practice management and revenue cycle management solutions for medical practices. Aprima uses a fast, flexible design that adapts automatically to a physician's workflow and sets the benchmark for ease of use, speed, and flexibility.
